The invention relates to an isolated NOVX polypeptide selected from NOV1a, NOV1a, NOV1a, NOV2b, NOV2c, NOV3a, NOV3b, NOV4b, NOV4b, NOV5c, NOV3b, NOV5b, NOV6b, NOV7, NOV7, NOV7, Nov6ctor comprising the nucleic acid, a cell comprising the vector; an anti-activity of NOV7, the nucleic acid, antibody and identifying agents that modulate the expression or activity of NOV7, the nucleic acid, antibody and modulators are useful in the diagnosis, treatment or prevention of developmental disorders, endocrine disorders, vascular disorders, infectious disease, reproductive disorder; tissue disorder; thrombocytopaenia; migraine; angiogenesis; asthma; X-linked severe combined immunodeficiency; inflammation; autoimmune disorder; immune disorder; blood disorder; haematopoietic disorder; gastrointestinal disease; respiratory disorder; hepatitis; fertility; hypertension; arteriosclerosis; ischaemia; rheumatoid arthritis; Grave's disease; wound healing. New cytoplasmic, nuclear, membrane bound and secreted NOVX polypeptides, useful for treating cancers and tumors, lung disorders, hematopoietic disorders, autoimmune diseases and immune disorders. vascular disorder, infectious disease, anorexia, cancer, stroke, neurodegenerative disorder, Alzheimer's disease, acute brain injury, central nervous system disorder, depression; lung disorder; endocrine disorder; Syptek KA, Taupier RJ, Vernet CAM, Colman SD; hernev VT, Malyankar UM, Shenoy S, Tchernev VT; Patturajan M, Burgess CE, Smithson G, Millet I; stone D, Gunther E, Ellerman K; Vernet CAM, C developmental disorder; Claim 9; Page 59-60; 210pp; English. 15-SEP-2000; 2000US-0232675P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New polynucleotide, useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel polynucleotide encoding a guanosine triphosphate-binding protein coupled receptor (GPCR). A polynucleotide the invention may have a use in gene therapy. The polynucleotide and polypeptide are useful for preparing a composition for treating a patie in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor. The polynucleotide sequences shown in ADC95548-ADC87616 encode GPCR's of th

```
The invention relates to an isolated polypeptide encoded by a nucleic acid molecule that is at least 80% identical to the G protein-coupled (GPCR) polynucleotides included in the specification. Also included are probes based on the GPCR sequences (including antisense probes), a host cell comprising an expression vector comprising the GPCR sequences (call comprising an expression vector comprising the GPCR sequence).

CC call comprising an expression vector comprising the GPCR sequence. C antibodies raised against the polypeptides, and methods of identifying modulators or metagonists of the polypeptides are useful for repressors, agonists or antagonists of the novel GPCR polypeptides or including the GAM4 polypeptide. The antibodies and nucleic acid probes as corrected and nucleic acids and are used to detect the presence of the polypeptides and nucleic acids and are used to detect the presence of the polypeptides and nucleic acids and are used to diagnose a variety of diseases or disorders in which GPCRs are involved e.g., Altheimer's disease, cardinoma, breast carcinoma, cardiomyopathy, chondrosarcoma, chronic obstructive pulmonary disease, Crohn's disease, psoriasis, rheumatoid architis, schizophrenia, ulcerative colitis, tuberculosis and many other costeoarthritis, osteoporosis, Parkinson's disease, psoriasis, rheumatoid arthritis, schizophrenia, ulcerative colitis, tuberculosis and many other cuseful for diagnosing cognition and memory disorders, pain perception disorders, obesity, diabetes, Alzheimer's disease. Preferably, compounds that decrease or increase the expression of galanin receptor (GAL4) can concleic acid is useful for treating the above mentioned disorders by gene to treat obesity, diabetes, hyperlipidaemia and stroke. The GPCR nucleic acid is useful for treating the above mentioned disorders by agenetic physelenger.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CGCCATGGAGGCCGCTAGCCTTTCAGTGGCCACCGCCGGCGTTGCCCTTGCCCTGGGACC

Oligonucleotides corresponding to conserved regions of known serotonin receptors were used in PCR of mouse brain RNA in presence of reverse transcriptase and the products were sequenced. One product with homology to known receptors was labelled and used to probe a CDNA library in Lambda UniZAP. The 2036 bp sequence AAA70264 was identified and deduced to encode a protein having 7 hydrophobic domains which represents a novel serotonin receptor which was designated 5HT5b. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 25-MAR-2003 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ACCAGCAGCGGACCCGGGACCCCGAGGCCCGAGGGATACTCGGTTCGACCCCGAGCGGC 124

The present invention relates to transgenic animals, compositions and methods relating to the characterisation of gene function. The invention also relates to transgenic mice comprising mutations in 5-hydroxy-tryptophan (5-HT)5B receptor gene. The transgenic mice are useful for identifying an agent that modulates the phenotype such as increased identifying no rential therapeutic agents for the treatment of pain or depression or increased pain sensitivity. They are also useful for identifying potential therapeutic agents for the treatment of pain or depression and for evaluating a potential therapeutic agent capable of affecting a condition associated with a mutation in a 5-HT5B receptor gene. Transgenic animals of the invention are also useful for testing the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GAACTAGTGGCAGCGCTGGCGATGCCACCGAGCCTGGCGAGTGAGCTGTCGACCGGGCGA 364
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              efficacy of proposed genetic and pharmacological therapies for human diseases such as neurological, neuropsychological or psychotic illnesses. The present sequence is mouse 5-HT5B receptor gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel transgenic mouse useful for identifying a potential therapeutic agent for the treatment of depression or pain, comprises disruption in 5-hydroxytryptophan 5B receptor gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         426 crcarcrideceedeceedeceecerrererereresegrectera

```
The nucleotide sequence of the novel rat serotonin receptor MR22. The gene encodes a protein of 370 amino acids. The protein contains 7 can semicate domains (TMDS), a putative N-linked glycosylation site and 4 putative sites for kinase C phosphorylation. Serotonin receptors a wide range of sensory, motor and behavioural functions in the central nervous system (CMS). Serotonin receptors belong to at least two protein superfamilies: G-protein-associated receptors containing 7 TMDs (S-HT13). The serotonin receptors presented in the patent represent prototypes that fall into three new serotonin subfamily classifications: 5-HT16-like (rat MR77 - AAQ72271 and human MR77 - AAQ72271), 5-HT5 (subdivided into 5-HT5alpha, rat REC17 - AAQ72269 and 5-HT5 (brote by see cloned by amplification based on conserved amino acid sequences and used in two rounds of nested PCR amplification on a crat brain hypothalamic cDNA template. In the second round of amplification degenerate primers corresponding to conserved residues found in the TMDs. Degenerate primers were cloned into pBluescript cond and their corresponding proteins may be used in methods for determining ligand binding activity, detecting and altering expression of serotonin correctors, receptors, detecting and altering expression of serotonin receptors; detecting and their corresponding proteins may be used in methods for determining and electronic receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 in.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       serotonin receptors. Serotonin receptors are also known to participate neurological processes. Pathologies including dementia, Parkinson's disease, eating disorders, pathological anxiety, migraine, headaches, insomnia and other conditions. (Updated on 25-MAR-2003 to correct PN field.)

The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Determining if a compound induces a toxic effect on a tissue or cell, for identifying hepatotoxic compounds, comprises comparing a gene expression profile of a tissue or cell sample to a database of Tox mean and non-Tox mean values.

Also included are probes based on the GPCR sequences (including antisense probes), a host cell comprising an expression vector comprising the GPCR sequence, antibodies raised against the polypeptides, and methods of identifying modulators of the polypeptides. The polypeptides are useful for identifying modulators compounds which function as modulators, activators, repressors, agonists or antagonists of the novel GPCR polypeptides including the GAL4 polypeptide. The antibodies and nucleic acid probes as described above can be used to detect the presence of the polypeptides and nucleic acids and are used to diagnose a variety of diseases or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; G protein-coupled receptor; GPCR; ds; GAL4; galanin receptor; Alzheimer's disease; amyotrophic lateral sclerosis; asthma; atherosclerosis; basal carcinoma; breast carcinoma; cardiomyopathy; chondrosarcoma; chronic obstructive pulmonary disease; Crohn's disease; depression; epilepsy; macular degeneration; lymphoma; melanoma; multiple sclerosis; osteoarthritis; osteoporosis; Parkinson's disease; psoriasis; rheumatoid arthritis; schizophrenia; ulcerative colitis; tuberculosis; cognition disorder; memory disorder; anorexia; hormonal release disorder; cardiovascular activity disorder; hormonal release disorder; obesity; diabetes; obesity; diabetes;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel G protein-coupled receptor polypeptides including galanin receptor polypeptides useful for identifying modulators that are useful for treating Alzheimer's disease, psoriasis, melanoma, multiple sclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  disorders in which GPCRs are involved e.g., Altheimer's disease, amyGrophic lateral sclerosis, asthma, atherosclerosis, basal cell carcinoma, breast carcinoma, cardiomyOpathy, chondrosarcoma, chronic obstructive pulmonary disease, Crohn's disease, depression, epilepsy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       occidente purmonary disease, Crohn's disease, depression, epilepsy, macular degeneration, lymphoma, melanoma, multiple sclerosis,

arthritis, osteoporosis, Parkinson's disease, psoriasis, rheumatoid arthritis, schizophrenia, ulcerative colitis, tuberculosis and many other diseases listed in the specification. The probes and antibodies are also useful for diagnosing cognition and memory disorders, anorexia, hormonal release disorders, cardiovascular activity disorders, pain perception disorders, obesity, diabetes, Alzheimer's disease. Preferably, compounds be used to increase the expression of galanin receptor (GAL4) can be used to treat obesity, hyperlipidaemia and stroke. The GPCR nucleic acid is useful for treating the above mentioned disorders by gene therapy techniques. The present sequence is a novel GPCR polymucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         489
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           549

A method for haplotyping the HTRSA gene in an individual comprises identifying the nucleotide at one or more polymorphic sites and
                                                                                                        Human; 5-hydroxytryptamine receptor 5A; HTR5A; serotonin; gene; ds; neuroprotective; neurological disease; depression; epilepsy; gene therapy; single nucleotide polymorphism; haplotype pair; chromosome 7q36.1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel genetic variants of 5-Hydroxytryptamine (Serotonin) Receptor isogenes, useful for improving efficiency and reliability in drug development for treating neurological diseases.
                                                                                                                                                                                                                                                        "Single nucleotide polymorphism"

         the HTRSA haplotypes given in the specification or whether both copies are defined by a haplotype pair. This method is useful in genotyping, whereby all possible haplotype pairs can be assigned to specific genotypes. An association between a trait and a haplotype or haplotype pair of the HTRSA gene can be identified by comparing the frequency of the haplotype pair in a population exhibiting the trait with the frequency of the haplotype pair in a population exhibiting the trait with indicates the trait is associated with the haplotype or haplotype pair in a reference population, where a higher haplotype frequency in the trait population indicates the trait is associated with the haplotype or haplotype pair. HTRSA and its corresponding DNA are used for studying the expression and function of HTRSA, and in screening for candidate drugs to treat diseases related to HTRSA activity, such as neurological disorders, including depression and epilopsy. This sequence represents the DNA encoding the human HTRSA polypeptide
                                                                                                                                                                                                                                                                                                                                                     126

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABB83619) of 12-24 amino acids. Also described: (I) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          08-AUG-2002.
```

avidity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for CC tracting immune-related diseases, jenuth-related diseases, for all regeneration-related diseases, immunological-related cell proliferative diseases, or autoimmune diseases, growth-related cell proliferative corresponding immune-related diseases, immunological-related cell proliferative diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, catherosclerosis, bacterial, fungal, protozcan or viral infections, catherosclerosis, bacterial, fungal, protozcan or viral infections, catherosclerosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, crohn's disease, diabetes, graft versus host disease, parkinson's disease, multiple sclerosis, pain, psoriasis, cancer, contractive depression, schizophrenia, dementia, mental retardation, memory loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or used in immunoassays and immunodiagnosis. ABZ42523 to ABZ425869 encode GPCR proteins given in ABP81675 to ABP82018, which are used in the present invention

/note="Torgan: pooled brain, lung, testis; Vector:
/note="Torgan: pooled brain, lung, testis; Vector:
pcMV-SPORT6; Sited 1: Not1; Site 2: EcoRV (destroyed); RNA
source anonymous pool of 6 male brains, age 89. Library is
male lung, age 27; and 1 male testis, age 69. Library is
oligo-dT primed and directionally cloned (EcoRV site is
destroyed upon cloning). Average insert size 1.8 kb,
insert size range 1-3 kb. Library is normalized and
enriched for full-length clones and was constructed by C.
Gruber (Invitrogen). Research Genetics tracking code
